

RANSOMWARE RESCUE AS A SERVICE

Solution Overview

HOW QUICKLY CAN YOU RECOVER FROM A RANSOMWARE ATTACK?

Ransomware represents a real and fast-growing threat to businesses and government agencies at the federal, state, and local levels. Despite the recent onslaught of high-profile attacks, many organizations lack the required knowledge, infrastructure, and capabilities to recover from full or partial cyber attacks. Their ability to do so quickly, efficiently, and seamlessly ultimately determines the impact on their productivity, revenue, security posture, and reputation. For most organizations, the stakes couldn't be higher.

GET BACK TO BUSINESS WITH OROCK RRaaS

ORock Ransomware Rescue as a Service (RRaaS) provides your organization with the necessary backups and data so you can quickly and successfully recover from an attack with more confidence and less downtime. It delivers specialized components you need to deploy a comprehensive cyber security and business continuity plan that reduces your risk.

ORock security and IT engineers collaborated with data center IT leaders at HPE and Aruba to design, integrate, and deploy a hybrid solution. It ensures you have protected backups that are securely maintained, encrypted, and separated from your IT infrastructure in the event of a cyber security compromise. These backups are stored in a high-security cloud environment, where they are quickly retrieved and delivered on-demand by a highly-trained support team from ORock and HPE. The RRaaS solution:

Enables continuous scheduling and automation of critical data and IT environment backups and images

Provides secure, encrypted, and preconfigured hybrid bi-directional data transfer over the Internet or a network connection

Incorporates storage technologies on-prem and in the cloud that safely and securely back up and protect critical organizational data

Employs trained network, security, and ransomware recovery professionals to help you quickly retrieve critical backups and execute a complete or partial recovery of your environment or data

KEY BENEFITS

Increase Business Recoverability
Managed services built to enable quick recovery from an attack

Expand and Complement Your Team's Security Skills
Support current IT staff with professionals specifically trained to help recover from ransomware attacks

Integrate Your Backup and Recovery
Next-generation hardware and software expand your enterprise IT infrastructure with hybrid cloud capabilities, including access to critical backups in the cloud

Prevent Financial Losses and Operational Disruption
Proactively ensure your organizational and critical infrastructure images and data are systematically backed up and recoverable

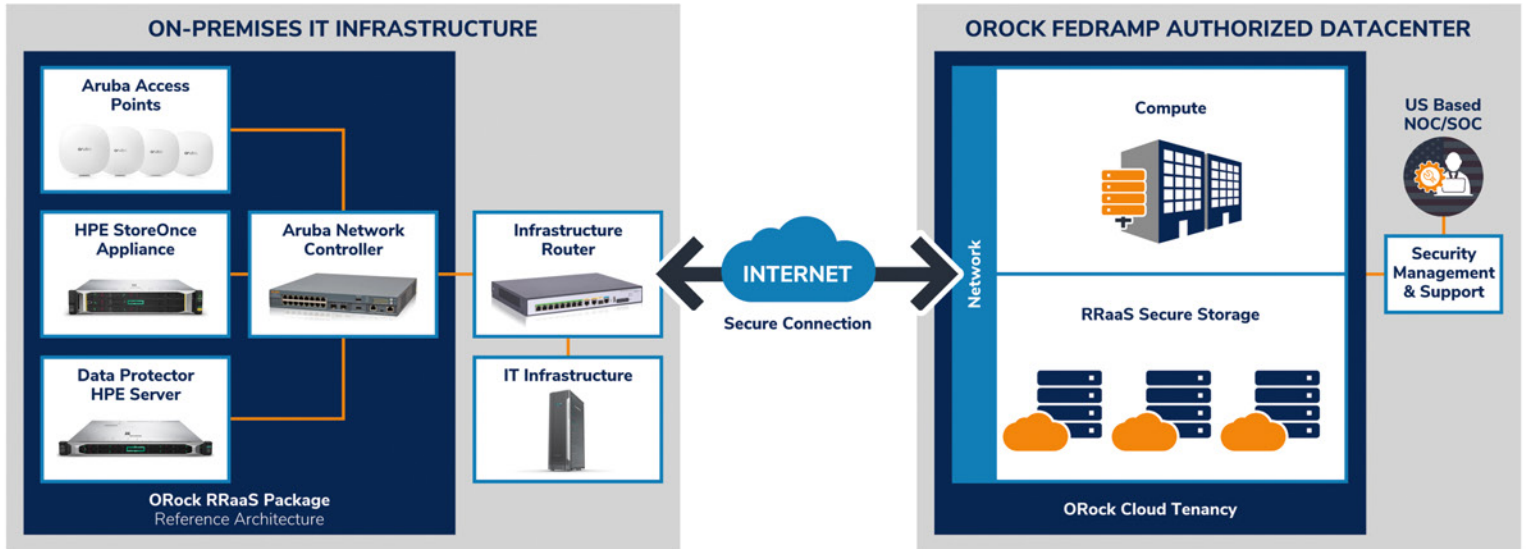

Secure Your Data
Hybrid cloud solution architected from end to end with the latest-generation physical and software security components and cloud technologies

Save Money
Delivered as a consolidated OpEx solution with predictable monthly or annual costs and a flat-rate billing model with no data ingress or egress fees

Built-In NOC/SOC Support
Provided by US citizens located in a US facility, with real humans answering the phone to support your needs

HOW IT WORKS

ORock has assembled the right hardware, software, and expertise to deliver an end-to-end solution that greatly simplifies and accelerates your hybrid cloud strategy and enhances your ability to recover from a ransomware attack. We fully engage with your team to understand your requirements and objectives, assess your current infrastructure, and build and deploy a solution that is fully managed for you. This is all delivered for a monthly operating expense that maximizes value.

RRaaS CORE COMPONENTS

Secure Hybrid Connection	Secure On-Prem Hardware	Secure Data Center and Cloud	Expert Managed Services
<p>Engineered by network security experts, this secure connection provides bi-directional connectivity between your on-premises environment and the ORockCloud.</p>	<p>Designed and architected using the latest-generation data center hardware and software from HPE and Aruba, it is uniquely deployed and managed for security, data protection, and performance.</p>	<p>Integrated to ensure a complete hybrid strategy, RRaaS on-premises components are tightly integrated to the ORockCloud environment to provide unparalleled data security, encryption, and performance.</p>	<p>Delivered by IT and cybersecurity professionals from HPE and ORock, RRaaS provides hands-on planning, implementation, and ongoing solution support. If rapid access and recovery are required, this team of support specialists is there to help.</p>

Prepare your organization to recover quickly from an attack.
