

# SECURE CLOUD SOLUTIONS for the Healthcare Industry

## MIGRATE TO OROCK AND EXPERIENCE THE MOST SECURE CLOUD

Never before have healthcare organizations faced so many unique challenges: crippling cyber-attacks, the COVID-19 pandemic and explosive data growth, to name the big ones. The pandemic alone has wreaked havoc on operations—stressing staffing, systems and revenue as never before—and IT departments, under pressure to cut costs and keep a lid on headcount, are stretched thin.

Healthcare organizations have specific data storage needs that require the highest standards of security and compliance coupled with knowledgeable, attentive support—from storage design, migration and rollout, to maintenance and day-to-day support. IT teams want to have control over their environment and be able to scale up or down, while avoiding vendor lock-in when flexibility is called for. They want common-sense, cost-effective, predictable pricing. These specialized needs go far beyond the remit of traditional cloud service providers whose transfer and egress fees can quickly overwhelm the per-gigabyte cost of active and static storage—and where nobody answers the phone if you need help.

## COMPLIANT AND CUSTOMIZED SOLUTIONS

The good news is that it's easier than you think to migrate to the cloud. ORock Technologies provides IT infrastructure and cloud solutions built specifically for secure data operations in the healthcare industry, where enterprise customers must satisfy the most stringent requirements for security and compliance. ORock provides superior healthcare data management and storage solutions that ensure data integrity and multiple layers of security, protecting the most sensitive data. ORock Technologies works with healthcare organizations to deliver customized data storage solutions that prioritize:

- Built-in government-grade security, with 325+ security controls
- Regulatory compliance, including HIPAA, HITECH, PCI DSS and FedRAMP certification
- Predictable pricing model with no egress fees (which can lead to cost overruns)

Don't wait for ransomware attacks, the cash crunch, and the endless need for more storage to get worse. Make your decision now and explore ORock Technologies today.

## Key Benefits

### Compliance

Comply with strict regulatory standards, including HIPAA/HITECH, PCI DSS & FedRAMP

### Price Predictability

Flat-rate billing with no egress fees & an operational expenditure model

### No Vendor Lock-in

Avoid the risks of proprietary technologies & inflated exit costs

### 24/7/365 Customer Support

Get U.S.-based support for configuration, setup, onboarding & compliance reporting

**Plus, ORock's offerings are easy to use & administer, including:**

Container orchestration platform

High-performance, low-cost cloud storage solutions

# OROCK STORAGE, HOSTING AND CONTAINER SOLUTIONS FOR HEALTHCARE

ORock's solutions are purpose-built to enable healthcare payers, providers and vendors to analyze, store and protect vast amounts of confidential data while complying with stringent regulations such as HIPAA, HITECH, PCI DSS and FedRAMP.

## Storage in the ORock Cloud

ORock's storage and data backup solutions combine the financial benefits of long-term storage with the convenience of immediate, on-demand access.

Securely store, archive and back up your own confidential data without the need to wait hours to retrieve medical images, healthcare records and insurance files.

Receive simple, secure, and predictable cloud-based storage options on an OpEx basis with outstanding price and performance on both Object and Block storage.

Experience government-grade data security, fast performance, instant accessibility and affordable costs.

Benefit from flat-rate billing model with no charge for data egress and realize significant savings over hyperscale cloud storage options.

## Hosting in the ORock Cloud

Ease your migration to the cloud and protect your sensitive data with stringent security and compliance controls like HIPAA, HITECH, PCI DSS and FedRAMP.

Choose from several options and cloud configurations that meet the strictest industry needs for security, data classification, business models, target operating models, application architectures, performance, and cost.

Rely on highly-scalable Infrastructure as a Service (IaaS) capabilities and a fit-for-purpose hybrid cloud to power your hybrid cloud strategy.

Experience a true open source cloud complete with flexible compute, storage and networking options.

24/7/365 NOC and SOC services included in base pricing with a single point of contact for issue resolution.

## Containers on ORock

Containers represent the future of software development and application modernization. They solve the problem of getting software to run reliably and efficiently from one computing environment to another by bundling together an application's entire runtime environment into one package that is easily moved and managed, while consuming fewer system resources to save costs.

Choose between two distinct Platform as a Service (PaaS) solutions that streamline container adoption for application modernization, data science capabilities and many additional use cases.

Leverage fully-managed "as a service" offerings that feature ORock's government-grade security and flat-rate billing with no data egress fees.

Use containers without worrying about data security or unpredictable costs.

## MEETING THE HIGHEST STANDARDS OF HEALTHCARE COMPLIANCE

ORock is built and managed according to security best practices and standards with HIPAA patient privacy and data security requirements in mind. Schellman & Company, an leading independent third-party, performed ORock's audit and attestations validating ORock's security architecture, systems and practices.
